Byla uvolněna nová verze Zen-Cart 1.3.8!!!
  **Stahovat můžete v sekci ke stažení- nebo rychlým odkazem
z postranního boxu. Čeština byla již také uvolněna.**

Více o verzi 1.3.8 (kopie anglického textu)

A couple important notes if upgrading:
  If you are using ANY PayPal modules, please write down your settings, then remove the module and re-install it, and then fill in your settings again.
 If you're using the PayPal IPN (Website Payments Standard) module, WHEN YOU RECONFIGURE, be sure to also setup PDT token information if you'd like faster completion of transactions. If you are using **either of the AuthorizeNet modules**, please write down your settings, then remove the module and re-install it, and then fill in your settings again. If you are using **the USPS module**, please write down your settings, then remove the module and re-install it, and then fill in your settings again. If you are using **the Linkpoint/YourPay API payment module**, please write down your settings, then remove the module and re-install it, and then fill in your settings again.**O verzi 1.3.8**
 Zen Cart v1.3.8 is officially PayPal-Certified for PayPal Website Payments Pro and PayPal Express Checkout

 Přidané novinky:
 PayPal Website Payments Pro added, for US and UK merchants.**NEW: Combine Shopping Cart Contents** .... If customer logs in and had items in their saved shopping cart, they are now taken to their cart and shown a message alerting them to the fact that those items have been merged with their new cart. This warning can be disabled via switch in admin: Admin->Configuration->Stock->Show Notice of Combining Shopping Cart on Login**Sideboxes for New/Featured/Special can now contain more than 1 product.** Also, the randomizing of the selected products has been improved. The number of items to be shown can be set in Admin->Configuration->Maximum Values**Authorize.net SIM module** ... MD5 support was added, meaning that you can set an MD5 validation key in your Authorize.net account and in the module, making sure that the communications are double-validated before payment is accepted. Prevents spoofing.**Authorize.net eCheck module added .** .. If you have an account with Authorize.net and wish to offer eCheck payment options, the built-in module will handle this for you.**USPS module updated** ... USPS has made some changes in the last 6 months, some announced, some not. The module has been updated to accommodate these changes. You will need to Remove and re-Install the module in Admin->Modules->Shipping in order to make this work properly. (Write down your settings first, for easier re-configuration!) Added: login pages now have a built-in security token, which prevents XSRF and other hacksAdded: Ability to ban user accounts via admin (edit customer) Added: Home & Per-page metatags can now be defined in the meta_tags.php language fileAdded: EZ-Page metatags can now be defined in the meta_tags.php language fileAdded: additional pages

added to robots-exclusion list prevent indexing of non-product pagesAdded: Admin server-info page now reports database-size info and various PHP settingsAdded: If customer logs in and had items in their saved shopping cart, they are now taken to their cart and shown a message alerting them to the fact that those items have been merged with their new cart.Added: Quick Customer address listing of whole address bookAdded: manufacturer pulldown can skip manufacturers with no associated productsAdded: warning in admin if Welcome Coupon is approaching expiry.Added: Admin orders are now searchable on product name or model, or order numberAdded: Month numbers added to CC expiry dates in pulldowns of core payment modulesAdded: Customer comments can be included on packing slip and invoiceAdded: Authorize.net E-Check module addedAdded: nochex_apc payment module added and integrated with coreEnhanced: Authorize.net SIM module overhaul, including MD5 hash support, CVV, debugEnhanced: Authorize.net AIM module improvements, including MD5 hash support, capt/voidEnhanced: Linkpoint/Yourpay API payment module overhaul, adding capt/void/refund capabilityEnhanced: Customers page in admin now shows open GV balances, and is sortable on sameEnhanced: Textarea counter for text-input-attribute fields improved to ignore spaces and CREnhanced: Improvements to the affiliate-feedback info during checkout-process Enhanced: PayPal IPN now supports PDT to allow real-time-handling of PayPal Standard transactions without having to wait for IPN in all cases. Requires that merchant has enabled PDT and enters their encryption key/token.Enhanced: Session security improved with additional sanitization

Provedené změny:
 Change: CSS -- Some template ID tags changed to classes because rendered from inside a loop Change: Updated some payment modules to display "not configured" alerts if appropriateChange: table CAPTIONs moved into lang file for upcoming-products codeChange: USPS - updates to handle various 2007 changes made by USPSChange: Installer now also sets shipping country to match store country during initial setupChange: Installer now detects CURL support more effectively Change: added CURL testing script and IPN communication check tool to extras folderChange: magic_quotes_sybase is now disabled at runtime if server has it enabledChange: paypal IPN postbacks no longer use SSL due to so many hosts not having SSL support in their fopen wrapper configurations.Change: added worio.com and panscient spiders to spider detection listChange: "NF" changed to "NL" for province of Newfoundland CanadaChange: PayPal IPN now uses init_system instead of ipn_application_top, to minimize likelihood of addons causing IPN transactions to fail. Change: ezpages now uses mediumtext field type instead of the smaller text typeChange: payment modules no longer able to store entire CC/CVV numbers. PCI rules.Change: admin activity log now tracks login attempts, thus allowing identification of brute-force login tries; also stores longer referrer dataChange: db structure change to db_cache and session tables, allowing larger datatypesChange: hard-coded delimiters on attribute prices and weights moved to _info language filesChange: renamed "Credit Card" module in admin to "Credit Card - Offline Processing" for clarityChange: admin payment modules are now more friendly when discovering mismatched language files vs payment modules, ie: for cases where newbies upload files to wrong placeChange: default minimum city length set to 2 instead of 3, per code suggestionChange: whos_online referrer data truncated to suit database data type restrictionsChange: orders_products_attributes field changed from BLOB to TEXT since not binaryChange: admin can send newsletters to self for testing purposesChange: customer_firstname added to $_SESSIONChange: ezpages links no longer include &chapter=0 Change: added field-definition checker to sniffer classChange: split_page_results now handles 'distinct' queriesChange: payment modules accepting credit cards now give the number and name of monthsChange: SMTP email password now shows as **** in admin instead of plain textChange: ot_total order-total module can no longer be 'removed' via admin, for safetyChange: zen_order_id fields in paypal and linkpoint_api tables changed to order_id to prevent confusion encountered by

folks fiddling in raw database export filesChange: email system improvements to minimize dumping due to content challengesChange: basic support added for Gmail mail support as long as webhost supports SSL/TLSChange: partial CC digits now included in order-confirmation emailChange: if problems found with configure.php, instead of going directly to zc_install, we now present a more friendly page with some instructions and FAQ linksChange: Added audience entry for "non-purchasing" customers for sending newsletters to

POZNÃ•MKA: Stylesheet zmÄ›ny:

- media manager ... converted IDs to Classes: `.mediaTitle`, `.mediaTypeLink`
- textarea ... removed float:left

ADDED NEW STYLE SELECTORS for Shipping Estimator output:

- `#shoppingcartBody #shippingEstimatorContent`
- `.seDisplayedAddressLabel`
- `.seDisplayedAddressInfo`
- `.seShipTo`

OstatnÃ aplikovanÃ© bugfixy:
